TABLE OF CONTENTS

Abstract iii
1 Introduction 1
2 Choice of Stress-Strain Curve 2
3 Determination of Strain at Ultimate Tensile Stress 4
4 Ultimate Tensile Stress and Rupture Strain 5
5 Maximum and Minimum YS/UTS 6
6 Maximum/Minimum True Stress/Strain at Fracture 9
7 Temperature Dependence of Yield stress and Ultimate Tensile Stress 11
8 True Fracture Strain 12
9 Low-Temperature Stress-Strain Curves 13
10 Strain-Rate Dependence 16
11 Final Curves: Some Examples 18
References 22
Appendix A: Short- and Long-Term Goals for the Task Group on Materials Supporting Division 3 Strain-Based Criteria 33
A.1 Short-Term Goals 34
A.2 Long-Term Goals 35

LIST OF TABLES

Table 5-1: Relationships between UTS, YS and Hardness 8
Table 9-1: Temperatures when 50% Martensite is Formed after 30% Strain (Md(30/50) C) 15
Table 10-1: Strain-Rate Adjustment Factors 17
Table A-1: Permitted Material Specifications and Products 34

LIST OF FIGURES

Figure 2-1: Comparison of Measured Strain at Ultimate Tensile Stress of Experimental Values (INL) [1] with calculated values (m2 in Section VIII, Division 2) 2
Figure 2-2: Comparison of Calculated Stress-Strain Curves with Measured Curves 3
Figure 3-1: Engineering Fracture Strain as a Function of Engineering Strain at UTS Using Different Data Sources where Strain at UTS and Engineering Fracture Strain were available 4
Figure 3-2: Relationship between engineering strain at ultimate tensile stress (UTstrain) and engineering fracture strain (EFS). Data replotted from Figure 3-1. 4
Figure 4-1: Dependence of Fracture Elongation on UTS: No significant correlation exists 5
Figure 5-1: Relation between YS and UTS for Austenitic Steel at Room Temperature 6
Figure 5-2: Influence of a 20% Yield Stress Difference on Stress-Strain Curve for Same UTS Values 7
Figure 6-1: Extreme Possibilities to Obtain True Stress-Strain Curves between UTS and Final Fracture 9
Figure 6-2: Tangent Moduli for Different 304 and 316 Tests (metric units) at Various Temperatures; Scatterband Upper Bound 700, Lower Bound 400 10
Figure 7-1: Yield Stress and Ultimate Tensile Stress for Several 304-Type and 316L Type Data 11
Figure 7-2: Comparison of INL Data with YS and U-Table Values 11
Figure 8-1: True Fracture Strain of 304L and 316L 12
Figure 9-1: Typical Stress-Strain Curves for 304L (Engineering) and 316L (True) at -20F (INL data) 13

Figure 9-2: True Stress-Strain Curves for 304L Measured at -20°F up to UTS compared to Proposed Minimum and Maximum Stress-Strain Curves....13
Figure 9-3: Formation of Martensite in Austenites....14
Figure 10-1: Yield Stress Ratio as a Function of Strain Rate....16
Figure 11-1: Upper and Lower Bound Stress-Strain Curves for 304L at Room Temperature....18
Figure 11-2: Comparison of true stress-strain curve determined with Ramberg-Osgood-type of evaluation (blue line) with parametric approach (green line). Material 304L measured at room temperature....19
Figure 11-3: Parameter a as function of temperature (a low represents the lower bound curve and a high refers to the upper bound curve)....19
Figure 11-4: Parameter b as function of temperature (b low represents the lower bound curve and b high refers to the upper bound curve)....20
Figure 11-5: Parameter c as function of temperature (c low represents the lower bound curve and c high refers to the upper bound curve)....20
Figure 11-6: Parameter d as function of temperature (c low represents the lower bound curve and c high refers to the upper bound curve)....21
Figure 11-7: Parameter e as function of temperature (c low represents the lower bound curve and c high refers to the upper bound curve)....21
