

AN AMERICAN NATIONAL STANDARD

ENGINEERING DRAWING AND RELATED DOCUMENTATION PRACTICES

Mathematical Definition of Dimensioning and Tolerancing Principles

ASME Y14.5.1M-1994

The American Society of
Mechanical Engineers

345 East 47th Street, New York, N.Y. 10017

CONTENTS

Foreword	iii
Standards Committee Roster	v
1 Scope and Definitions	1
1.1 General	1
1.2 References	1
1.3 Mathematical Notation	1
1.4 Definitions	2
1.5 Summary of Conventional Designations	5
1.6 Format	5
2 General Tolerancing and Related Principles	7
2.1 Feature Boundary	7
2.2 Dimension Origin	7
2.3 Limits of Size	7
3 Symbology	11
4 Datum Referencing	13
4.1 General	13
4.2 Concepts	13
4.3 Establishing Datums	13
4.4 Establishing Datum Reference Frames	16
4.5 Datum Reference Frames for Composite Tolerances	17
4.6 Multiple Patterns of Features	17
4.7 Tabulation of Datum Systems	18
5 Tolerances of Location	21
5.1 General	21
5.2 Positional Tolerancing	22
5.3 Projected Tolerance Zone	24
5.4 Conical Tolerance Zone	25
5.5 Bidirectional Positional Tolerancing	27
5.6 Position Tolerancing at MMC for Boundaries of Elongated Holes	32
5.7 Concentricity and Symmetry	32
6 Tolerances of Form, Profile, Orientation, and Runout	35
6.1 General	35
6.2 Form and Orientation Control	35
6.3 Specifying Form and Orientation Tolerances	35
6.4 Form Tolerances	35
6.5 Profile Control	39
6.6 Orientation Tolerances	40
6.7 Runout Tolerance	45
6.8 Free State Variation	48

Appendix

A	Consolidation of Parallelism, Perpendicularity, and Angularity	49
A1	General	49
A2	Planar Orientation.....	49
A3	Cylindrical Orientation	57
A4	Linear Orientation.....	66
Index	79
