## 1

<b>Taguchi Methods for Challenges in Manufacturing</b>	<b>1</b>
1.1 Competition Among Manufacturing Industries and Business Administration Strategy	3
1.2 Example: Solving a Downstream Quality Problem Using a Traditional Approach	12
1.3 Robust Design for Downstream Noise Conditions	14
1.4 Reduction of Output Response Variation	14
1.5 From a Traditional Problem-Solving Approach to a Robust Design Approach	21
1.6 Assessment of Energy Transformation Efficiency	23

1.7	Traditional and Taguchi-Class Optimization Methods	34
1.8	Case Studies Based on Robust Design Procedures	41
<b>2</b>	<b>Mathematical Structural of Orthogonal Arrays</b>	<b>47</b>
2.1	Traditional Methods to Select Optimal Design Conditions	49
2.2	New Optimization Method Based on Orthogonal Arrays	50
2.3	Confirmation of the Optimal Condition	53
2.4	Introduction to Orthogonal Arrays	56
<b>3</b>	<b>Methods to Select and Compound Noise Factors</b>	<b>61</b>
3.1	Fire-Extinguishing Problem: Nagano Olympics Torch	63
3.2	Output Variation Root Causes	64
3.3	Noise Factor Selection	67
3.4	Noise Factors and Orthogonal Arrays (Outer Arrays)	68
3.5	Assigning a Signal Factor and Noise Factors to an Outer (Orthogonal) Array	69
3.6	Compounding Noise Factors for Preliminary Experiments	70
3.7	Noise Factors for Accelerated Tests (and Overload Tests)	71

3.8	Noise Factors for Reliability Tests	71
3.9	Surrogate Noise Factors	73
3.10	Noise Factors for Computer Simulations	76
3.11	Dr. Taguchi's Quality Engineering Strategies for Noise Factors	78

## 4

	<b>Electric Motor Optimization Using Dynamic S/N (Signal-to-Noise) Ratios</b>	<b>81</b>
4.1	Electric Motor Basic Function and Its Evaluation Characteristics	83
4.2	Electric Motor Optimization Using an $L_{18}$ Orthogonal Array	87

## 5

	<b>S/N (Signal-to-Noise) Ratios for Static Characteristics and the Robustness Optimization Procedure</b>	<b>127</b>
5.1	Experimental Design Checklist of Robustness Optimization for Business Administrators and Management (Step 1)	130
5.2	Set-up Targets for the Design Objective (Step 2)	130
5.3	Generate as Many Factors as Possible, Classify the Factors, and Develop a Cause-and-Effect Diagram (Step 3)	131
5.4	Categorize the Factors (Step 4)	133
5.5	Selection of Orthogonal Arrays (Step 5)	135

5.6	Number of Factor Levels and Range of Levels (Step 6)	137
5.7	Experimental Factors and Levels in an $L_{18}(2^13^7)$ Orthogonal Array (Step 7)	141
5.8	Selection of Noise Factors (Step 8)	143
5.9	Sequence of Experimental Runs (Step 9)	145
5.10	Conduct Comparative Experiments (Step 10)	146
5.11	Data Transformation (Static Type S/N Ratios) for Optimization of Experimental Output (Step 11)	146
5.12	Optimization Procedure for the Control Factors (Step 12)	153
5.13	Confirmation of the Estimate From the Main-Effect Plots (Step 13)	158
5.14	Selection of Optimal Design Candidates (Step 14)	161
5.15	Adjustment of the Gold-Plating Thickness to 5 Micron (Step 15)	165
5.16	Optimal Settings and Confirmation Experiment (Step 16)	166
5.17	Applying the Optimal Settings to the Production Process (Step 17)	166

## 6

	<b>Standard Usage and Transformation of Taguchi-Class Orthogonal Arrays</b>	<b>169</b>
6.1	Experimental Optimization Methods	171
6.2	Factor Effects and Output Responses	172

6.3	Orthogonal Arrays for Product/Process Development	173
6.4	Assessment of Interaction Effects	174
6.5	Orthogonal Arrays and the Number of Factor Levels	178
6.6	Useful Techniques to Assign Experimental Factors to Orthogonal Arrays	186
6.7	A Case Study Based on the Assignment Techniques From the Previous Sections Using an $L_{18}$ Array (Improvement of Resin Film Tensile Strength Case Study Using Five-Level Factors, Dummy Treatment, Infeasible Runs, and Missing Data)	190

7
---

	<b>Taguchi Methods (Robust Design) and Traditional Experimental Optimization Procedures</b>	<b>205</b>
7.1	Traditional Experimental Optimization Procedures	209
7.2	Input-Output Relationship Based on Input-Output Energy Transformation Approach	217
7.3	Improving the Effects of Individual Factors	228
7.4	Reproducibility of Traditional Experimental Optimization Methods	232
7.5	Traditional Experimental Optimization Methods Versus Taguchi Methods From the Viewpoint of Business Administrators	233

7.6	Taguchi Methods in the United States	236
7.7	Summary: Comparisons Between Traditional Experimental Optimization Methods and Taguchi Methods	238

## 8

	<b>Historical Events and Milestone Case Studies of Taguchi Methods</b>	<b>241</b>
8.1	Biography of Dr. Genichi Taguchi (From Birth to Present)	243
8.2	Milestone Taguchi Methods Case Studies	247
8.3	Brief Discussion of Commonly Referenced Taguchi Methods Case Studies	250

## 9

	<b>Taguchi-Class Experimental Design Methods and Applications</b>	<b>303</b>
9.1	Case Studies Based on the Row-Assembly Method of Taguchi-Class Experimental Design (Using Idle Column and Columns of Three- and Four-Level Factors)	306
9.2	Case Study Based on Modified Taguchi-Class Experimental Layouts	317
9.3	Categorization-and-Grouping Analysis and the Associated Long-Term Reliability Analysis	322
9.4	Root Cause Identification for Product Defects Based on an Orthogonal Layout	333

9.5	Multiple Sets of Experiments Based on the Same Orthogonal Array	335
9.6	Treatment for Multiple Randomly Associated Orthogonal Arrays	337

## 10

	<b>Energy Transformation/Transfer and Generic Function</b>	<b>351</b>
10.1	Transformation From First-Level Energy Into Second-Level Energy	353
10.2	Types of Energy Transformation Mechanisms	354
10.3	Energy Transformation Mechanisms Case Studies	358
10.4	Brake System Improvement Case Study	373
10.5	Energy Transferring Mechanism	375
10.6	S/N (Signal-to-Noise) Ratios for Energy Transformation/Transferring Mechanisms	380
10.7	Q&A	382

## 11

	<b>Two-Step Design Optimization and Tolerance Design</b>	<b>385</b>
11.1	Two-Step Design Optimization	387
11.2	Tolerance Design Applications	401
11.3	Summary	409
11.4	Tolerance Specification Differences	410

**12**

<b>Logarithm Transformation of the Output Response Data for Optimization</b>	<b>413</b>
12.1 Functional Input-Output Relationship and Control Factor Levels	415
12.2 Ideal Function of Input-Output Energy Transformation	416
12.3 A Metric of Functional Robustness for Design Optimization	420
12.4 Functional Relationship Between Input Energy and Output Response	425
12.5 Functional Relationship of a System	428
12.6 Additivity of Business Activities	430

**13**

<b>Output Characteristics, Statistics, and Calculation Examples of Taguchi Methods</b>	<b>433</b>
13.1 Dynamic and Static Characteristics	435
13.2 Classification and Assessment of Static Characteristics	452
13.3 Analysis of Percentage Data	468
13.4 Analysis of Ranking or Categorical Data	469
13.5 Operating Window Method	471
13.6 Dynamic Operating Window Method (Chemical Reaction Example)	472
13.7 Analysis of Digital Data (Optimization Based on Two Types of Error)	479

13.8	Development of Dynamic Characteristics Based on Transformability	484
13.9	Dynamic Characteristic of Two Signal Factors	488
13.10	S/N Ratio for Wavelet or Hermite-Format Output Response	491
13.11	Standard S/N Ratio for Nonlinear Systems	495

## 14

### **Methods and Mathematics for the Generation of Orthogonal Arrays** 499

14.1	Investigation and Verification of Mathematical Properties of Orthogonal Arrays	500
14.2	Illustrations of Orthogonal Arrays Based on the Concept of Vectors	502
14.3	Methods to Generate Orthogonal Arrays	505
14.4	Printing Errors in the Orthogonal Arrays in Some Experimental Design Textbooks	518

## 15

### **Orthogonal Polynomial and Treatment Quantification for Missing Data** 521

15.1	Missing Data	523
15.2	Replacement Values for Missing Data	523
15.3	Comparison Between Approximation Methods Based on Main-Effect Plots and Orthogonal Polynomials	536

15.4	Iterative Approximations When There are Multiple Missing Values	541
15.5	Quantification of Missing Data Caused by Various Test Disruptions	544

## 16

	<b>Reliability Test and Reliability Design</b>	<b>547</b>
16.1	Reliability Data and Design for Reliability	549
16.2	Overconfidence and Misunderstanding of Traditional Reliability Engineering	551
16.3	Reliability Testing and Design for Reliability	552
16.4	Functional Assessment for a CD Motor Reliability Case Study	556
16.5	Functional Assessment for Reliability Design of a Semiconductor	559
16.6	Part Purchasing Decisions Based on Functional Assessment	569

## 17

	<b>Pattern Recognition and the MT (Mahalanobis-Taguchi) System</b>	<b>575</b>
17.1	Pattern Recognition	577
17.2	Applications of the MT System to Identify Key Factors in Becoming Professional Musicians	577

17.3	Analysis Procedure and Case Studies of the MT System	584
17.4	Recent Development of the MT System	602

## 18

### **Illustrations and Applications of Standard Condition S/N (Signal-to-Noise) Ratios** 609

18.1	Nonlinearity and Dynamic Characteristics	611
18.2	Definition of a Standard Condition ( $N_0$ )	613
18.3	Calculation Formula for Standard Condition S/N Ratio of a Dynamic Characteristic	614
18.4	Calculation of a Standard Condition S/N Ratio for the Push-Button Case Study	616
18.5	The Role of the Standard Condition S/N Ratio	627
18.6	Tuning (Adjustment) Methods	629
18.7	Mathematics Behind the Standard Condition S/N Ratio	630

## 19

### **Orthogonal Arrays and Software Debugging Methods** 633

19.1	Software Development and the Associated Bug Problems	634
19.2	Software Debugging Method	634

	19.3	Multiple Factors and Multiple Levels in Software Debugging Experiments and the Corresponding Concerns	639
	19.4	Printer Software Debugging Case Study	641
	19.5	Training Materials for Software Debugging	646
<b>20</b>		<b>CAD/CAE Simulation Optimization</b>	<b>647</b>
	20.1	New CAE/CAD Simulation Role for Robust Design	649
	20.2	CAST Design Development Process	654
	20.3	Selection of Noise Factors for CAD/CAE Simulations	657
	20.4	CAST Design for High-Speed Optimization	659
	20.5	Fast CAST Design	664
	20.6	CAST Design Case study for Next-Generation High Density Disk Drive	664
<b>21</b>		<b>Q&amp;A: Business Administration and Taguchi Methods</b>	<b>679</b>
<b>22</b>		<b>Exercises</b>	<b>729</b>
	22.1	Methods to Assign Experimental Factors to Orthogonal Arrays	731

22.2	Sliding Level Method to Assign Correlated Factors to Orthogonal Arrays	733
22.3	Raw Data Transformation Through S/N (Signal-to-Noise) Ratio and Sensitivity	734
22.4	Data Analysis Based on Orthogonal Arrays	741
22.5	Optimization of an Automatic Screening Machine (Two Types of Errors in a Digital Input/Output System)	775
22.6	Operating Window Extension Method (From Chapter 5, Section 2 of <i>New Experimental Design Methods</i> )	776
22.7	Tolerance Design for Parts and Manufacturing Process	779
22.8	MTS (Mahalanobis-Taguchi System and Gradual Categorization Method)	783
22.9	Experimental Design for Product Assembly	787

The following appendices do not appear in the book, but are viewable for free at [www.asmedl.org](http://www.asmedl.org)

<b>Appendix A</b>	<b>The Roles and Usage of Orthogonal Arrays</b>	<b>789</b>
<b>Appendix B</b>	<b>Q &amp; A: Methods to Categorize Factors and Set Factor Levels</b>	<b>899</b>
<b>Appendix C</b>	<b>Q &amp; A: Data Transformation and Analysis Methods</b>	<b>957</b>
<b>Appendix D</b>	<b>Q &amp; A: The MT (Mahalanobis-Taguchi) System and Pattern Recognition</b>	<b>1011</b>
