

# CONTENTS

<b>Preface</b>	<b>xviii</b>		
<b>CHAPTER 1 Introduction</b>	<b>1</b>		
1.1 Model of a Valve Closure and Fluid Transient	1	2.3.6 Friction Factors from Churchill's Equation	28
1.2 Pipe Stresses	2	2.3.7 Pipe Friction Losses for Bingham Plastic Fluids and Power Law Fluids	34
1.2.1 Static Stresses	2	2.3.8 Friction Losses in Series Pipes	38
1.2.2 Dynamic Stresses	2	2.3.9 Flow and Friction Losses in Parallel Pipes	40
1.3 Failure Theories	3	2.3.10 Inlets, Outlets, and Orifices	41
1.4 Valve Closure Model Summary	3	2.3.11 Fitting Construction	41
		2.3.12 Valve Designs	43
		2.3.12.1 Gate Valves	55
<b>CHAPTER 2 Steady-State Fluid Mechanics and Pipe System Components</b>	<b>5</b>	2.3.12.2 Globe Valves	55
2.1 Conservation of Mass and Bernoulli's Equation	5	2.3.12.3 Ball Valves	55
2.1.1 Conservation of Mass	5	2.3.12.4 Butterfly Valves	56
2.1.2 Bernoulli's Equation	6	2.3.12.5 Plug Valves	56
2.1.3 Limitations of Bernoulli's Equation Due to Localized Flow Characteristics	7	2.3.12.6 Diaphragm Valves	56
2.2 Hydraulic and Energy Grade Lines	11	2.3.12.7 Check Valves	57
2.3 Friction Losses for Pipes	11	2.3.12.8 Relief Valves	62
2.3.1 Types of Fluids	13	2.3.12.9 Safety Valves	62
2.3.1.1 Viscosity Definition	13	2.3.12.10 Needle Valves	67
2.3.1.2 Properties of Newtonian and Non-Newtonian Fluids	14	2.3.12.11 Pinch Valves	67
2.3.1.3 Laminar Flow in Newtonian and Non-Newtonian Fluids	15	2.3.12.12 Traps	67
2.3.2 Pipe Friction Losses for Newtonian Fluids	16	2.3.12.13 Pressure Regulators	68
2.3.3 Friction Factors from the Moody Diagram	16	2.4 Friction Losses for Fittings and Open Valves	68
2.3.3.1 Surface Roughness	19	2.4.1 Graphic Method for Friction Losses in Fittings and Valves	69
2.3.3.2 Pipe and Tubing Dimensions	19	2.4.2 Crane's Method for Friction Losses in Steel Fittings and Valves	69
2.3.3.3 Density and Viscosity Data and Their Effects on Pressure Drops Due to Flow	23	2.4.3 Modified Crane's Method for Friction Losses in Fittings and Valves of Other Materials and Pipe Diameters	69
2.3.4 Tabulated Pressure Drops for Water Flow in Steel Pipe	26	2.4.4 Darby's Method for Friction Losses in Fittings and Valves for Newtonian and Non-Newtonian Fluids	69
2.3.5 Effects of Aging on Water-Filled Steel Pipes	26	2.4.5 Tabulated Resistance Coefficients for Fittings and Valves Using Crane's, Darby's, and Hooper's Methods	74
		2.5 Valve Performance and Friction Losses for Throttled Valves	74

2.5.1	Valve Flow Characteristics	75	3.1.2	Other Codes and Standards	120
2.5.2	Throttled Valve Characteristics	75	3.1.3	ASME B31.3, Process Piping	120
2.5.3	Resistance Coefficients for Throttled Valves	75	3.2	Pipe Material Properties	121
2.5.4	Valve Actuators	77	3.2.1	Tensile Tests	121
2.5.5	Flow Control	83	3.2.1.1	Ductile Materials	121
2.5.6	P'I'D' Control	84	3.2.1.2	True Stress and True Strain	122
2.6	Design Flow Rates	88	3.2.1.3	Strain Hardening	122
2.7	Operation of Centrifugal Pumps in Pipe Systems	88	3.2.1.4	Loss of Ductility	123
2.7.1	Types of Centrifugal Pumps	88	3.2.1.5	Strain Rate Effects on Material Properties	124
2.7.2	Pump Curves	89	3.2.1.6	Brittle Materials	124
2.7.2.1	Affinity Laws	89	3.2.1.7	Elastic Modulus Data	124
2.7.2.2	Impeller Diameter	90	3.2.1.8	Yield Strength and Ultimate Strength Data	124
2.7.2.3	Impeller Speed	91	3.2.2	Charpy Impact Test	127
2.7.2.4	Acoustic Vibrations in Pumps and Pipe Systems	91	3.2.3	Fatigue Testing and Fatigue Limit	128
2.7.2.5	Power and Efficiency	92	3.2.3.1	Fatigue Limit Accuracy	128
2.7.2.6	Effects of Other Fluids on Pump Performance	92	3.2.3.2	Fatigue-Testing Methods and Fatigue Data	129
2.7.2.7	Net Positive Suction Head and Cavitation	92	3.2.3.3	Relationship of Fatigue to Vibrations	130
2.7.3	Motor Speed Control	99	3.2.3.4	Environmental and Surface Effects on Fatigue	131
2.7.3.1	Induction Motors	99	3.2.3.5	Summary of Fatigue Testing	132
2.7.3.2	Motor Starters	99	3.2.3.6	Fatigue Testing for Pipe Components	132
2.7.3.3	VFDs	99	3.2.3.7	Fatigue Curves for B31.3 Piping	132
2.7.3.4	Pump Shutdown and Inertia of Pumps and Motors	100	3.2.3.8	Pressure Cycling Fatigue Data	132
2.7.4	Pump Performance as a Function of Specific Speed	100	3.2.3.9	Fatigue Data for Pressure Vessel Design	132
2.7.5	Pump Heating Due to Flow Through the Pump	102	3.2.4	Poisson's Ratio	136
2.7.6	System Curves	102	3.2.5	Material Densities	136
2.7.7	Parallel and Series Pumps	107	3.2.6	Thermal Expansion and Thermal Stresses	136
2.7.8	Parallel and Series Pipes	107	3.2.6.1	Thermal Stresses	136
2.8	Jet Pumps	107	3.2.6.2	Longitudinal Thermal Expansion of a Pipe	148
2.9	Two Phase Flow Characteristics	108	3.2.6.3	Bending Due to Thermal Expansion	152
2.9.1	Liquid/Gas Flows	108	3.3	Pipe System Design Stresses	152
2.9.1.1	Air Entrainment and Dissolved Gas	110	3.3.1	Stress Calculations	153
2.9.1.2	Air Binding in Pipes	113	3.3.2	Load-Controlled and Displacement-Controlled Stresses	154
2.9.2	Open Channel Flow	113	3.3.3	Maximum Stresses	154
2.9.3	Liquid/Vapor Flows	114	3.3.4	Internal Pressure Stresses, Hoop Stresses	154
2.9.4	Liquid/Solid Flows	114	3.3.4.1	Corrosion and Erosion Allowances	155
2.9.5	Siphons	114	3.3.4.2	Hoop Stress and Maximum Pressure	156
2.10	Design Summary for Flow in Steady-State Systems	116	3.3.5	Limits for Sustained Longitudinal Stresses, Occasional Stresses, and Displacement Stresses	157
<b>CHAPTER 3</b>	<b>Pipe System Design</b>	<b>119</b>	3.3.6	Allowable Stresses	161
3.1	Piping and Pressure Vessel Codes and Standards	119	3.3.7	Pipe Stresses and Reactions at Pipe Supports	164
3.1.1	ASME Piping and Pressure Vessel Codes	119	3.3.7.1	Axial Stresses and Reactions Due to Pressure and Flow	164

3.3.7.2	Restraint and Control of Forces	168	4.4.6	Limit Load Analysis for Bending	207
3.3.7.3	Reactions and Pipe Stresses	168	4.4.7	Limit Load Analysis for Equations for Bending of a Pipe	207
3.3.7.4	Torsional Stresses and Moments	171	4.4.8	Comparison of Limit Load Analysis to Cyclic Plasticity	208
3.3.7.5	Pipe Stresses Due to Pipe and Fluid Weights	171	4.4.9	Plastic Deformation Due to Pressure, Hoop Stress	208
3.3.7.6	Stress Intensification Factors	171	4.4.10	Autofrettage	209
3.3.7.7	Flexibility Calculation Example	171	4.4.11	Combined Stresses for Plasticity	209
3.3.7.8	Comparison of Code Stress Calculations	176	4.4.12	Comparison of Limit Load Analysis to the Bree Diagram	209
3.3.7.9	Pipe Stresses Due to Wind and Earthquake	179	4.4.13	Summary of Plastic Failure Analysis	210
3.3.7.10	Pipe Supports and Anchor Designs	179	4.5	Fatigue Failure	210
3.3.8	Structural Requirements for Fittings, Flanges, and Valves	180	4.5.1	High-Cycle Fatigue Mechanism	210
3.3.9	Pipe Schedule and Pressure Ratings for Fittings, Flanges, and Valves	181	4.5.2	High-Cycle Fatigue Life of Materials	211
3.3.10	Flange Stresses	182	4.5.3	Triaxial Fatigue Theories	212
3.3.11	Limiting Stresses for Rotary Pump Nozzles	182	4.5.3.1	Maximum Normal Stress Theory, Triaxial Stresses	212
3.4	Hydrostatic Pressure Tests	182	4.5.3.2	Maximum Shear Stress Theory, Triaxial Stresses	212
3.5	Summary of Piping Design	185	4.5.3.3	Octahedral Shear Stress Theory, Triaxial Stresses	213
<b>CHAPTER 4 Pipe Failure Analysis and Damage Mechanisms</b>			4.5.4	Cumulative Damage	214
4.1	Failure Theories	193	4.5.5	Rain Flow Counting Technique	214
4.1.1	State of Stress at a Point, Multiaxial Stresses	193	4.5.6	Use of Fatigue Theory and Equations	215
4.1.2	Maximum Stresses	194	4.5.7	Pressure Vessel Code, Fatigue Calculations	217
4.1.2.1	Principal Stresses	194	4.5.7.1	Method 1: Elastic Stress Method for Fatigue	217
4.1.2.2	Maximum Shear Stresses	196	4.5.7.2	Method 2: Elastic-Plastic Stress Method for Fatigue	217
4.1.2.3	Stresses Due to Pipe Restraint	197	4.5.7.3	Method 3: Structural Stress Method for Fatigue	218
4.1.3	Failure Stresses	197	4.5.8	Fatigue Summary	218
4.1.4	Comparison of Failure Stress Theories	197	4.6	Fracture Mechanics	218
4.1.5	Maximum Normal Stress Theory (Rankine)	199	4.6.1	Fracture Mechanics History	219
4.1.6	Maximum Shear Stress Theory (Tresca, Guest)	200	4.6.2	Applications of Fracture Mechanics and Fitness for Service	219
4.1.7	Distortion Energy/Octahedral Shear Stress Theory (Von Mises, Huber, Hencky)	201	4.6.3	LEFM	219
4.2	Structural Damage Mechanisms/ Failure Criteria	201	4.6.4	Elastic-Plastic Analysis	221
4.3	Overload Failure or Rupture	201	4.6.5	Elastic-Plastic Fracture Mechanisms	221
4.3.1	Burst Pressure for a Pipe	201	4.6.6	Crack Propagation	221
4.3.2	External Pressure Stresses	202	4.6.7	Stress Raisers	224
4.4	Plastic Deformation	202	4.6.8	Fracture Mechanics Summary	224
4.4.1	Plasticity Models for Tension	202	4.7	Corrosion, Erosion, and Stress Corrosion Cracking	225
4.4.2	Cyclic Plasticity	203	4.8	Flow-Assisted Corrosion (FAC)	226
4.4.3	Elastic Follow-Up	203	4.9	Leak Before Break	226
4.4.4	Cyclic, Plastic Deformation	203	4.10	Thermal Fatigue	227
4.4.5	Plastic Cycling for Piping Design	206	4.11	Creep	227
			4.11.1	Examples of Creep-Induced Failures	227
			4.11.2	Creep in Plastic and Rubber Materials	228

4.12	Other Causes of Piping Failures	228	5.13	Parallel Pipes/Intersections	262
4.13	Summary of Piping Design and Failure Analysis	229	5.14	Centrifugal Pump Operation During Transients	266
			5.14.1	Graphic Water Hammer Solution for Pumps	266
			5.14.2	Reverse Pump Operation Due to Flow Reversal	266
			5.14.3	Transient Radial Pump Operation	268
			5.14.4	MOC Water Hammer Solution for Pumps	268
			5.14.5	Use of Valve Closure Speeds to Control Pump Transients	269
			5.15	Column Separation and Vapor Collapse	269
			5.15.1	Column Separation and Vapor Collapse at a High Point in a System With Both Pipe Ends Submerged	270
			5.15.2	Column Separation and Vapor Collapse at a High Point in a Pipe With One End Submerged	273
			5.15.3	Column Separation and Vapor Collapse at a Valve	275
			5.15.4	Solution Methods to Describe Column Separation and Vapor Collapse	275
			5.16	Positive Displacement Pumps	276
			5.17	Effect of Trapped Air Pockets on Fluid Transients	277
			5.18	Additional Corrective Actions for Fluid Transients	278
			5.18.1	Valve Stroking	278
			5.18.2	Relief Valves	278
			5.18.3	Surge Tanks and Air Chambers	278
			5.18.3.1	Fluid Resonance Example	280
			5.18.4	Water Hammer Arrestors	280
			5.18.5	Surge Suppressors	280
			5.18.6	Check Valves	280
			5.18.7	Flow Rate Control for Fluid Transients	280
			5.19	Summary of Fluid Transients in Liquid-Filled Systems	283
				<b>CHAPTER 6 Fluid Transients in Steam Systems</b>	<b>287</b>
			6.1	Examples of Water Hammer Accidents in Steam/Condensate Systems	287
			6.1.1	Brookhaven Fatalities	287
			6.1.2	Hanford Fatality	287
			6.1.3	Savannah River Site Pipe Damages	289
			6.1.3.1	Pipe Failure During Initial System Startup	289
			6.1.3.2	Pipe Damages During System Restart	290
			6.1.4	Pipe Failures Due to Condensate-Induced Water Hammer	291
<b>CHAPTER 5 Fluid Transients in Liquid-Filled Systems</b>		<b>233</b>			
5.1	Slug Flow During System Startup	233			
5.1.1	Slug Flow Due to Pump Operation	234			
5.1.2	Slug Flow During Series Pump Operation	234			
5.1.3	Pump Runout Effects on Slug Flow	234			
5.2	Draw Down of Systems	235			
5.3	Fluid Transients Due to Flow Rate Changes	235			
5.3.1	Examples of Pipe System Damages in Liquid-Filled Systems	235			
5.3.1.1	Hydroelectric Power Plants	235			
5.3.1.2	Valve Closure	235			
5.3.1.3	Vapor Collapse in a Liquid-Filled System	236			
5.3.1.4	Damages Due to Combined Valve and Pump Flow Rate Changes	237			
5.4	Types of Fluid Transient Models for Valve Closure	239			
5.5	Rigid Water Column Theory	239			
5.5.1	Basic Water Hammer Equation, Elastic Water Column Theory	242			
5.5.2	Arithmetic Water Hammer Equation	245			
5.6	Shock Waves in Piping	247			
5.6.1	Wave Speeds in Thin Wall Metallic Pipes	248			
5.6.2	Wave Speeds in Thick Wall Metallic Pipes	249			
5.6.3	Wave Speeds in Nonmetallic Pipes	250			
5.6.4	Effects of Entrained Solids on Wave Speed	250			
5.6.5	Effects of Air Entrainment on Wave Speed	250			
5.7	Uncertainty of the Water Hammer Equation	252			
5.8	Computer Simulations/Method of Characteristics	253			
5.8.1	Differential Equations Describing Fluid Motion	253			
5.8.2	Shock Wave Speed Equation	254			
5.8.3	MOC Equations	254			
5.9	Valve Actuation	257			
5.10	Reflected Shock Waves	261			
5.11	Reflected Waves in a Dead-End Pipe	261			
5.12	Series Pipes and Transitions in Pipe Material	262			

6.2	Water Hammer Mechanisms in Steam/Condensate Systems	291	7.2.2.1	Homogeneous Solution to the Equation of Motion for a Step Response	311
6.2.1	Water Cannon	292	7.2.2.2	Particular Solution to the Equation of Motion for a Step Response	311
6.2.2	Steam and Water Counterflow	292	7.2.2.3	General Solution to the Equation of Motion for a Step Response	312
6.2.3	Condensate-Induced Water Hammer in a Horizontal Pipe	292	7.2.3	Impulse Response for a SDOF Oscillator	312
6.2.4	Steam Pocket Collapse and Filling of Voided Lines	293	7.2.4	Ramp Response for a SDOF Oscillator	313
6.2.5	Low-Pressure Discharge and Column Separation	295	7.2.5	SDOF Harmonic Response	313
6.2.6	Steam-Propelled Water Slug	295	7.2.5.1	SDOF Load Control	314
6.2.7	Sudden Valve Closure and Pump Operations	295	7.2.5.2	Steady-State, SDOF Load-Controlled Vibration	316
6.3	Blowdown	295	7.2.5.3	Frequency Effects on the DMF During SDOF Load-Controlled Vibration	316
6.3.1	Sonic Velocity at Discharge Nozzles	296	7.2.5.4	DMF for SDOF Load Control	317
6.3.2	Piping Loads During Blowdown	297	7.2.6	Multi-DOF Harmonic Response	317
6.3.3	Steam/Water Flow	298	7.2.6.1	Multi-DOF Load Control	317
6.3.4	Pressures in Closed Vessels and Thrust During Blowdown	298	7.2.6.2	Modal Contributions for Multi-DOF Vibrations	319
6.4	Appropriate Operation of Steam Systems for Personnel Safety	300	7.2.6.3	Participation Factors for SDOF Vibrations	319
6.4.1	System Startup	300	7.2.6.4	Resonance for Multi-DOF Vibrations	319
6.4.2	Steam Traps	301	7.2.6.5	Load-Controlled Vibrations for Rods	321
6.5	Summary of Fluid Transients	301	7.2.6.6	Load-Controlled Vibrations for Beams	323
<b>CHAPTER 7 Shock Waves, Vibrations, and Dynamic Stresses in Elastic Solids</b>			7.3	Dynamic Stress Equations	324
7.1	Strain Waves and Vibrations	303	7.3.1	Triaxial Vibrations	324
7.1.1	One-Dimensional Strain Waves in a Rod	303	7.3.2	Damping	325
7.1.2	Three-Dimensional Strain Waves in a Solid	304	7.3.2.1	Proportional Damping	325
7.1.3	Vibration Terms	304	7.3.2.2	Structural Damping for Pipe Systems	326
7.1.4	Vibrations in a Rod Due to Strain Waves	305	7.3.2.3	Fluid Damping and Damping for Hoop	327
7.1.5	Dilatational Strain Waves in a Rod	305	7.4	Summary of Dynamic Stresses in Elastic Solids	330
7.1.6	Wave Reflections in a Rod	305	<b>CHAPTER 8 Water Hammer Effects on Breathing Stresses for Pipes and Other Components</b>		
7.1.7	Strain Wave Examples for Rods	306	8.1	Examples of Piping Fatigue Failures	331
7.1.8	Inelastic Damage Due to Wave Reflections	308	8.2	FEA Model of Breathing Stresses for a Short Pipe	331
7.2	Single Degree of Freedom Models	308	8.2.1	FEA Assumptions	332
7.2.1	SDOF Oscillators	308	8.2.2	Model Geometry and Dynamic Pressure Loading	334
7.2.1.1	SDOF Equation of Motion	309	8.2.3	FEA Model for a Pipe With Fixed Ends	335
7.2.1.2	SDOF, Free Vibrations	309	8.2.4	Stress Waves and Through-Wall Radial Stresses	336
7.2.1.3	Damping Effects	309	8.2.5	Hoop Stresses for a Pipe With Fixed Ends	336
7.2.1.4	Damping Ratio	309			
7.2.1.5	Log Decrement	309			
7.2.1.6	Phase Angle Effects	310			
7.2.1.7	SDOF Responses to Applied Forces	311			
7.2.2	Step Response for a SDOF Oscillator	311			

8.2.6	Axial Stresses for a Pipe with Fixed Ends	337	8.5.2.8	Effects of the Wave Speed	354
8.2.7	Impulse Loads	337	8.5.2.9	Maximum Damped Precursor Stress	354
8.2.8	Stresses for a Pipe with One Free End	338	8.5.2.10	Aftershock-Free-Vibration Stresses	354
8.2.9	FEA Summary	339	8.5.2.11	Damping	355
8.3	Theory and Experimental Results for Breathing Stresses	340	8.5.2.12	Maximum Stress When the Critical Velocity is Not Considered	355
8.4	Flexural Resonance	340	8.5.3	Comparison of Theory to Experimental Results for a Gas-Filled Tube	355
8.4.1	Flexural Resonance Theory	340	8.5.4	Comparison of Theory to Experimental Results for a Liquid-Filled Pipe	356
8.4.1.1	Moment in a Differential Element	340	8.5.4.1	Test Setup and Raw Data	358
8.4.1.2	Membrane Forces in a Cylindrical Shell	341	8.5.4.2	Test Results and Discussion	359
8.4.1.3	Axial Displacement in a Cylindrical Shell	342	8.5.4.3	Breathing Stress Frequency	363
8.4.1.4	Equation of Motion for a Cylindrical Shell	342	8.5.4.4	Wave Velocities	363
8.4.1.5	Evaluation of Flexural Resonance	343	8.5.4.5	Pressure Surge Magnitude	363
8.4.1.6	DMF and the Critical Velocity	344	8.5.4.6	Equivalent Axial and Hoop Strains	365
8.4.1.7	Critical Velocity	344	8.5.4.7	Example of Corrective Actions and Fitness for Service	365
8.4.1.8	Breathing-Mode Frequency	345	8.5.4.8	Corrective Actions	365
8.4.1.9	Flexural Resonance Assuming Fixed Pipe Ends	345	8.5.4.9	Fitness for Service	365
8.4.2	Flexural Resonance Examples	345	8.5.5	Comparison of Flexural Resonance Theory to Dynamic Stress Theory	367
8.4.2.1	Strains in Gun Tubes	345	8.6	Valves and Fittings	369
8.4.2.2	Strains Due to Internal Shocks in a Tube	346	8.7	Pressure Vessels	369
8.4.3	Summary of Flexural Resonance Theory	348	8.8	Plastic Hoop Stresses	370
8.5	Dynamic Hoop Stresses	348	8.8.1	FEA Results for a Shock Wave in a Short Pipe	370
8.5.1	Bounded Hoop Stresses from Beam Equations	348	8.8.2	Experimental Results for Explosions in a Thin-Wall Tube	371
8.5.1.1	Precursor and Aftershock Vibrations	350	8.8.3	Explosions in Pipes	372
8.5.1.2	Pipe Wall Displacement Derivation	350	8.9	Summary of Elastic and Plastic Hoop Stress Responses to Step Pressure Transients	373
8.5.1.3	Pipe Wall Displacement Equation	350			
8.5.1.4	Critical Velocity	351			
8.5.1.5	DMF and Maximum Stresses from Beam Theory	351			
8.5.2	Dynamic Stress Theory	351	<b>CHAPTER 9 Dynamic Stresses Due to Bending</b>		<b>379</b>
8.5.2.1	Derivation of Dynamic Stress Equations	351	9.1	Deformations, Stresses, and Frequencies for Elastic Frames	379
8.5.2.2	Static Stress	352	9.1.1	Static Deflections and Reactions for Simply Supported Beams and Elastic Frames	379
8.5.2.3	Equation of Motion for a SDOF Oscillator	352	9.1.2	Frequencies for Simple Beams	379
8.5.2.4	Equation of Motion for a Cylinder Subjected to a Sudden Internal Pressure	352	9.1.3	Frequencies for Elastic Frames	381
8.5.2.5	Pipe Stresses Due to a Shock Wave	353	9.2	Elastic Stresses Due to Bending	383
8.5.2.6	Precursor Stresses	353	9.2.1	Step Response Calculation for Bending	384
8.5.2.7	Effects of the Arbitrary Selection of $t = 0$	354	9.2.1.1	Calculation Assumptions	384
			9.2.1.2	Axial Stresses	385
			9.2.1.3	Bending Stresses	386

9.2.1.4	Hoop Stresses	387	<b>CHAPTER 10</b>	<b>Summary of Water</b>	
9.2.1.5	Comparison of Calculated Bending Stress to an FEA Pipe Stress Model	388		<b>Hammer-Induced Pipe Failures</b>	<b>395</b>
9.2.2	Ramp Response for Bending	388	10.1	Troubleshooting a Pipe Failure	396
9.2.3	Impulse Response for Bending	390	10.2	Suggested References	396
9.2.4	Multiple Bend FEA Models	392	10.3	Recommended Future Research	397
9.3	FEA Model of Bending Stresses	393		<b>Appendix A: Notation and Units</b>	<b>399</b>
9.4	Plastic Deformation and Stresses Due to Bending	393	A.1	Systems of Units	399
9.4.1	Consideration of Earthquake Damages to Pipe Systems	393	A.2	Conversion Factors	400
9.5	Summary of Stresses During Water Hammer	393	A.3	Notation: Variables, Constants, and Dimensions	402
