

ASME PCC-3–2022
(Revision of ASME PCC-3–2017)

Inspection Planning Using Risk-Based Methods

AN AMERICAN NATIONAL STANDARD

**The American Society of
Mechanical Engineers**

ASME PCC-3-2022
(Revision of ASME PCC-3-2017)

Inspection Planning Using Risk-Based Methods

AN AMERICAN NATIONAL STANDARD

**The American Society of
Mechanical Engineers**

Two Park Avenue • New York, NY • 10016 USA

Date of Issuance: November 15, 2022

This Standard will be revised when the Society approves the issuance of a new edition.

ASME issues written replies to inquiries concerning interpretations of technical aspects of this Standard. Interpretations are published on the Committee web page and under <http://go.asme.org/InterpsDatabase>. Periodically certain actions of the ASME PCC Committee may be published as Cases. Cases are published on the ASME website under the PCC Committee Page at <http://go.asme.org/PCCcommittee> as they are issued.

Errata to codes and standards may be posted on the ASME website under the Committee Pages to provide corrections to incorrectly published items, or to correct typographical or grammatical errors in codes and standards. Such errata shall be used on the date posted.

The PCC Committee Page can be found at <http://go.asme.org/PCCcommittee>. There is an option available to automatically receive an e-mail notification when errata are posted to a particular code or standard. This option can be found on the appropriate Committee Page after selecting “Errata” in the “Publication Information” section.

ASME is the registered trademark of The American Society of Mechanical Engineers.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The standards committee that approved the code or standard was balanced to ensure that individuals from competent and concerned interests had an opportunity to participate. The proposed code or standard was made available for public review and comment, which provided an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not “approve,” “rate,” or “endorse” any item, construction, proprietary device, or activity. ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor does ASME assume any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representatives or persons affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

No part of this document may be reproduced in any form,
in an electronic retrieval system or otherwise,
without the prior written permission of the publisher.

CONTENTS

Foreword	v
Committee Roster	vi
Correspondence With the Post Construction Committee	vii
Summary of Changes	ix
1 Scope, Introduction, and Purpose	1
2 Basic Concepts	1
3 Introduction to Risk-Based Inspection	4
4 Planning the Risk Analysis	9
5 Data and Information Collection	14
6 Damage Mechanisms and Failure Modes	16
7 Determining Probability of Failure	18
8 Determining Consequence of Failure	21
9 Risk Determination, Analysis, and Management	28
10 Risk Management With Inspection Activities	32
11 Other Risk Mitigation Activities	35
12 Reanalysis	36
13 Roles, Responsibilities, Training, and Qualifications	37
14 Documentation and Record Keeping	39
15 Definitions and Acronyms	40
16 References	41
Nonmandatory Appendices	
A Damage Mechanism Definitions	47
B Damage Mechanism and Defects Screening Table	60
C Table of Examination/Monitoring Methods	67
D Quantitative Methods Including Expert Opinion Elicitation	71
E Examples of Risk-Based Inspection Program Audit Questions	79
F Suggested Practice for Evaluation of Pressure Vessels for Continued Cyclic Service	80
Figures	
2.1-1 Risk Plot	2
2.3-1 Management of Risk Using RBI	3
3.3.1-1 Continuum of RBI Approaches	5
3.3.4-1 Risk-Based Inspection Planning Process	7
4.4.1-1 Relationship Among Component, Equipment, System, Process Unit, and Facility	11
8.5-1 Determination of Consequence of Failure	27
9.2.1-1 Example of Calculating the Probability of a Specific Consequence	30
9.5.1-1 Example Risk Matrix Using Probability and Consequence Categories	31

D-4.3-1	Process of Performing a Monte Carlo Simulation	73
D-5.1-1	Probability of Failure Rate vs. Time	74

Tables

2.3-1	Factors Contributing to Loss of Containment	4
8.3.5-1	Three-Level Safety, Health, and Environmental Consequence Categories	23
8.3.5-2	Six-Level Safety, Health, and Environmental Consequence Categories	23
8.3.7-1	Six-Level Table	24
16-1	Reference Documents	42
16-2	Procurement Information	45
A-1	Damage Mechanism Definitions	48
B-1	Damage Mechanism and Defects Screening Table	61
C-1	Examination/Monitoring Methods	68
