

ASME V&V 10.1-2012

An Illustration of the Concepts of Verification and Validation in Computational Solid Mechanics

AN AMERICAN NATIONAL STANDARD

**The American Society of
Mechanical Engineers**

ASME V&V 10.1-2012

An Illustration of the Concepts of Verification and Validation in Computational Solid Mechanics

AN AMERICAN NATIONAL STANDARD

**The American Society of
Mechanical Engineers**

Three Park Avenue • New York, NY • 10016 USA

Date of Issuance: April 16, 2012

This Standard will be revised when the Society approves the issuance of a new edition.

ASME issues written replies to inquiries concerning interpretations of technical aspects of this Standard. Periodically certain actions of the ASME V&V Committee may be published as Cases. Cases and interpretations are published on the ASME Web site under the Committee Pages at <http://cstools.asme.org/> as they are issued.

Errata to codes and standards may be posted on the ASME Web site under the Committee Pages to provide corrections to incorrectly published items, or to correct typographical or grammatical errors in codes and standards. Such errata shall be used on the date posted.

The Committee Pages can be found at <http://cstools.asme.org/>. There is an option available to automatically receive an e-mail notification when errata are posted to a particular code or standard. This option can be found on the appropriate Committee Page after selecting “Errata” in the “Publication Information” section.

ASME is the registered trademark of The American Society of Mechanical Engineers.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed code or standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not “approve,” “rate,” or “endorse” any item, construction, proprietary device, or activity.

ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assumes any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

No part of this document may be reproduced in any form,
in an electronic retrieval system or otherwise,
without the prior written permission of the publisher.

CONTENTS

Foreword	iv
Committee Roster	v
Correspondence With the V&V Committee	vi
1 Executive Summary	1
2 Introduction	1
3 Purpose and Scope	2
4 Background	2
5 Verification and Validation Plan	5
6 Model Development	9
7 Verification	10
8 Validation Approach 1	14
9 Validation Approach 2	15
10 Summary	21
11 Concluding Remarks	21
12 References	22
Figures	
1 V&V Activities and Products	3
2 Validation Hierarchy Illustration for an Aircraft Wing	4
3 Schematic of the Hollow Tapered Cantilever Beam	6
4 Estimating a Probability Density Function From an Uncertainty Estimate, Δ	7
5 Illustration of the Two Validation Approaches	8
6 Illustration of the Basis of the Area Metric	8
7 Errors in Normalized Deflections	12
8 Area Between the Experimental and Computed CDF	16
9 Empirical CDF of the Validation Experiment Data	16
10 Random Variability in Modulus, E , Used in the Computational Model	18
11 Random Variability in Support Flexibility, f_r , Used in the Computational Model	19
12 Input Uncertainty Propagation Process	20
13 Computed CDF of Beam Tip Deflection	20
14 CDF of the Model-Predicted Tip Deflection, Empirical CDF of the Validation Experiment Tip Deflections, and Area Between Them (Shaded Region)	21
Tables	
1 Normalized Deflections	11
2 Numerical Solutions for Tip Deflections	13
3 Measured Beam-Tip Deflections From the Validation Experiments	16
4 Test Measurements of the Modulus of Elasticity, E	17
5 Test Estimates of the Support Flexibility	18
