<b>Series Editors' Preface</b>	<b>iii</b>
<b>ASME Press Robotics Engineering Book Series</b>	
<b>Advisory Group Members</b>	<b>v</b>
<b>Contributing Authors</b>	<b>vii</b>
<b>Preface</b>	<b>xiii</b>
<b>1. Linkages for leg mechanisms</b>	<b>1</b>
<i>Marco Ceccarelli</i>	
1.1 Walking issues for robots	1
1.2 A historical survey of mechanisms for walking machines	6
1.3 Modern solutions	13
1.4 Challenges for future developments	15
1.5 Conclusions	19
1.6 References	19
<b>2. Exoskeletons and bipeds</b>	<b>23</b>
<i>Qiang Huang and Zhangguo Yu</i>	
2.1 Exoskeletons	23
2.1.1 History and overview	24
2.1.2 Mechanism design principles	26
2.1.3 Sensing and control algorithm	29
2.1.4 Actuators and portable power supply	35
2.2 Biped	37
2.2.1 History and overview	38
2.2.2 Mechanism design	44
2.2.3 Motion planning	48
2.2.4 Stability control	51
2.2.5 Control system	56
2.2.6 Biped walking	58
2.3 Conclusions	66
2.4 References	68
<b>3. Mechanical design challenges in rescue robot prototyping</b>	<b>79</b>
<i>Emin Faruk Kececi</i>	
3.1 Introduction	79
3.2 Design challenges	80
3.3 Digital prototyping	81
3.4 Physical robot prototyping	83

3.5	Design process	86
3.6	Fault analyses	87
3.6.1	Functional conflicts	87
3.6.2	Materials and manufacturing methods	89
3.6.3	Testing	89
3.7	Conclusions and future directions	90
3.8	Acknowledgment	92
3.9	References	93
<b>4.</b>	<b>Networked control for mobile robots</b>	<b>97</b>
	<i>Xilung Ding</i>	
4.1	Introduction	97
4.2	Applications of networked control mobile robots	99
4.3	Introduction of NOROS robots	102
4.4	Advantages and challenges	104
4.5	Control challenges and achievements	106
4.5.1	Overview of NCS	106
4.5.2	Major accomplishments	108
4.6	Communication challenges and achievements	109
4.6.1	Key problems	109
4.6.2	Major accomplishments	110
4.6.3	Dynamic lunar exploration robots routing protocol	112
4.6.4	Dynamic lunar exploration robots routing protocol	112
4.6.5	The optimal ad hoc routing protocols design for multi moon exploration robots system	114
4.6.6	Simulation and results	116
4.7	Perception challenges and achievements	117
4.7.1	Key problems	117
4.7.2	Major accomplishments	118
4.7.3	Dynamic CSS localization system for NOROS robots	123
4.8	Conclusions and future works	124
4.9	References	125
<b>5.</b>	<b>Human-machine interface of mobile robot for posture</b>	<b>135</b>
	<i>I-Ming Chen</i>	
5.1	A survey of HMI for robots	135
5.1.1	Traditional input devices	136
5.1.2	Passive multi-axes manipulator	136
5.1.3	Touch screen	137

5.1.4	Human motion sensing devices	137
5.1.5	Bio-signal capture and speech recognition system	138
5.1.6	Challenges and open problems of HMI	138
5.2	Motion replication system	140
5.3	Visual and verbal feedback	143
5.3.1	Visual presentation and feedback	143
5.3.2	Visual presentation and feedback	144
5.4	System implementation	149
5.4.1	Hardware and system design	149
5.4.2	Kinematic model	150
5.4.3	Calibration procedure	151
5.4.4	Comparison method	153
5.5	Experiment	153
5.6	Results and discussion	155
5.6.1	Analysis of the questionnaire	155
5.6.2	Result of the performance	156
5.7	Conclusion	159
5.8	References	159
<b>6.</b>	<b>Robot education with mobile robots</b>	<b>165</b>
	<i>Jorge Solis</i>	
6.1	Introduction	165
6.2	Mobile robot platforms for education	168
6.2.1	RoboDesigner®	168
6.2.2	MiniWay®	174
6.2.3	Learning outcomes	182
6.3	Research problems and trends	184
6.4	Closure	185
6.5	References	185
