

Dimensioning and Tolerancing

Standard for Engineers Worldwide

ASME Y14.5-2009

The Y14.5 standard is considered the authoritative guideline for the design language of geometric dimensioning and tolerancing (GD&T). It establishes uniform practices for stating and interpreting GD&T and related requirements for use on engineering drawings and in related documents.

GD&T is an essential tool for communicating design intent—that parts from technical drawings have the desired form, fit, function and interchangeability. By providing uniformity in drawing specifications and interpretation, **GD&T reduces guesswork throughout the manufacturing process; thus helping to improve quality, reduce costs, and shorten delivery times.**

Now, a consensus panel of industry experts has revised Y14.5 for 21st-century applications!

In today's economy, your company cannot afford mistakes in interpreting engineering designs. That's why your purchase of the new Y14.5 is the best investment you can make today—for your company and your career.

Intended for design, drafting, mechanical, manufacturing, production, tool/gage, quality, process and project engineers, CAD/CAM/CAE specialists, inspectors and educators across a broad range of global manufacturing. Special emphasis on aerospace, automotive, medical device, precision instrumentation and related industries.

Print-Book / Order No. N00509

ASME Codes and Standards

ASME is the leading international developer of codes and standards associated with the art, science, and practice of mechanical engineering. Starting with the first issuance of its legendary Boiler & Pressure Vessel Code in 1911, ASME's codes and standards have grown to nearly 600 offerings currently in print.

More than 4,000 dedicated volunteers contribute their technical expertise in consensus on protecting public safety, while reflecting best practices of industry. The results of their efforts are being used in over 100 nations; thus setting the standard for code development worldwide.
